DIRTT

EDUCATION HELPS ONE
CEASE BEING INTIMIDATED
BY STRANGE SITUATIONS.

– *Maya Angelou*

Learning environments are under constant change. Technology, teaching methods, enrollment... all regularly stretch the abilities of the physical space and put it in jeopardy. Older buildings are most endangered, yet they bring a sense of stability and history to their neighborhoods. It is our duty to provide students with schools to support learning and buildings that support society.

By creating agile and highly functional interiors, the building itself becomes impervious to the winds of change. DIRTT Walls offer the ability to adapt to changes large and small. They support today's technology and whatever comes tomorrow. Each Wall is designed as you need, functionally, dimensionally and aesthetically.

DIRTT ENVIRONMENTAL SOLUTIONS

DIRTT implements ICE[®] intelligent, 3D software. ICE allows your design team to design your Walls while in the background the software creates your specifications, quote and parts list. It also simultaneously makes an interactive, real-time 3D interface where you and your team fly through, evening making modifications, which are automatically updated in the rest of the information.

Fast, clean construction and the ability to move are the reason you are reading about movable walls. The benefits exclusive to DIRTT Walls come in the form of support, accessibility and integration. Horizontal support is placed anywhere on your wall to hang new or legacy furniture, fixtures and equipment. Being horizontal, rather than vertical support means you place any of these anywhere along the wall and move when necessary. Each side of the Wall is independent, ready to do whatever you need it to do for the classrooms or offices on either side.

Now the school itself can keep up with the class.
